

The T(ree)

Have you ever realized how many similarities there are between the T and Yggdrasil?! Yeah, me too. Both sit at the center of the cosmos (or downtown) and **bridge** different realms (or neighborhoods). I think I'm really getting at something here... Let's map out a path from the center whose **branches each end at a realm**, and then **take a look back** to see what we can extract from this epiphany. (And like a tree — **no loops!**)

This is a variant of a Hashiwokakero/Bridges logic puzzle. In the standard version, each node has 0, 1, or 2 bridges going in each cardinal direction, with a total number of bridges equal to the number in the node. Bridges cannot cross and all nodes must be connected into a single group.
